

# Kaley — Seizures

Feb 27

Our Geriatric cat, Kaley, who is 16 started having multiple seizures late Monday night 1/22. We took her to ER vet and put her on Keppra and phenobarbital. It made her walk around like a drunken monkey. She was in a haze. We had to help her use the litter box. She was still determined to try to walk to places but couldn't. Then, she had diarrhea. My husband was distraught because he thought it was too much medication for her. She is also on methimazole and prednisolone. I found Pet Releaf

at Pet Food Express while buying sensitive stomach cat food. The sales rep was so passionate over this particular product. I watched the youtube videos and we decide to give it a try. We started with .25 ml at 6:00 and we notice within an hour she was more active than we had ever seen her. She was cleaning herself, walking around. Mind you we didn't stop her Rx meds. Our vet said it was ok to give CBD with the Rx. Her meds made her so lethargic. We gave her another 25 ml @ 10:30 with her meds. It looked like she finally had a good night sleep. All her blood work and test came back normal so know that these seizures are not coming from any underlying illness. Hopefully, this will get all her brain activity back to normal & we can wean her off at least one of the meds. Our vet wants to make she is seizure before we take her off one of them. We are so happy and we can tell Kaley is happy that she can walk around better.

# Dakota — Laryngeal Paralysis

Feb 27

Share this

In early summer of 2018, our girl Dakota was having issues breathing and we took her to her vet. She was diagnosed with Laryngeal Paralysis. We discussed surgery and had quickly decided that given her age, we would forego any surgery. We also had lost her sister, Maya, to the same disease after her surgery 6 years ago on Feb. 23. We found that she was

progressively getting worse with the hacking, the coughing and the general inability to breathe comfortably or sleep, which caused anxiety for her as well. I came across a post of someone whose dog was suffering from the same disease and she mentioned that they had started using CBD oil for him. Intrigued, I looked further into it. At that time, we were facing either putting Dakota down or doing the tie-back surgery. I found Pet Releaf and took the jump. It came quickly and we were able to get her going right away. Within the week, we noticed a significant difference in her anxiety, as well as her breathing and she was finally sleeping. It had slowed to normal, she wasn't wheezing as much and her overall attitude had taken a huge turn around! By the second week, her episodes of heavy panting had decreased to maybe 1 or 2x and it was really only when she gets super excited and happy. We will be continuing to use Pet Releaf for all of our CBD products. They have more than exceeded our expectations and we have our girl until it's truly her time. Thank you so much!

## Lazarus — Seizures

Oct 18

Lazarus is a 3-year-old cat living with a congenital portosystemic hepatic shunt (CPSS). This means Lazarus has an abnormally functioning portal vein. The portal vein is a large vein that collects blood from the systemic circulation and carries it into the liver, where toxins and other byproducts are removed. Lazarus has an abnormal vein growing out of his portal vein that allows blood to bypass or shunt around the liver. The shunt causes toxins to build up in Lazarus's body and cause a multitude of complications, the most serious being hepatic encephalopathy (HE). HE causes blindness, confusion, behavioral and mood changes, and seizures. Lazarus's

condition is so severe, he is not a possible candidate for surgery. The severity of his condition and his compromised liver also puts strict limitations on the medications I'm able to use to treat his condition. 4 months ago, I was really worried I was reaching the end of the road with Lazarus. I had spent 3 years doing a multitude of research and working with multiple vets and specialists. For a while had Lazarus down to 1-3 seizures a month. But then, his seizure activity began to increase and his appetite was dwindling. I thought we were out of options. That's when my favorite pet store (@thepawstand) suggested I try the Pet Releaf 330. Since starting him on the CBD oil, Lazarus has been completely seizure free! In addition to managing CPSS neurological symptoms, the CBD oil has also increased his appetite, enhanced his coat condition, and improved his

general demeanor. It's been completely life changing for Lazarus. He's so much happier and has so much more energy! I'm so beyond grateful for your product!

# Callie — Seizures

Sep 26

Share this

Meet Callie. She is a Black Goldendoodle who lives in NC. Her first seizure occurred around 3 months old while she was playing with another puppy. She had a few more seizures before we brought her to see a neurologist who prescribed her phenobarbital and Keppra after spending the night in the neuro ICU. It has been a long ride of adjusting medication dosages, changing her diet, restricting play with other dogs, changing her flea/tick medication, etc. Callie has never been seizure free, her seizures typically last 5-6 minutes and she usually needs an emergency medication to break her free. Usually,

after a seizure, she can't walk for an hour or more and is very lethargic the next 24 hours. Christmas of 2017 Callie went into a cluster of seizures, she had 7 seizures in a 24 hour period and ended up back in another neuro ICU. That was when I decided we needed to take a different approach; I began researching holistic medicine and was amazed at the success stories CBD had to offer. Callie has been using CBD oil for 4 months now and has been seizure free for 3.5 months. I am beginning to wean her off of the dangerous medications and allowing her to play with other dogs in small doses at a time. CBD has changed both of our lives for the better!

# Maisie — Situational Anxiety

Sep 26

I have a 3-year-old female long-haired cat named Maisie, that is the poster child for anxiety. She won't leave her little dark cave of a corner in our bathroom, (she will only come out when my partner and I are at work, and she knows our two-year-old Belgian Malinois doggo is locked safely away in her kennel.) and is constantly pulling her own hair out in massive clumps that she leaves all over the kitchen and hallway floor. She has this beautiful black coat, and an amazingly fluffy tail, that she is

destroying by being such a stress case.

So tonight when I stopped by the feed store I went ahead and bought your Hemp Oil 330, and when I got home I gave Maisie a half a dropper full as directed.

Holy Hemp Oil!!!!!! Within an hour or so, Maisie was out of her cave of solitude, and was out and about socializing with the other two cats WITH the dog standing nearby!!!!!!

Soon after that, she was hanging out RIGHT NEXT TO THE DOG!!!!!! Her mortal enemy!!!!

She's way more relaxed than I've ever seen her, and being more like her old self before we adopted the dog!!!!!!

I am absolutely beyond excited about the prospect of poor Maisie finally having a far more normal, stress-free life, AND having her fluffy tail and hind leg region back, instead of bald butt and back!!!! I can't wait to see the changes over the next few weeks!!!

Thank you!!!! I'm going to be telling everyone I know with pets to get on down to the feed store and buy some of your amazing oil!!!!

# Tess — Cancer Symptoms

Sep 26

Share this

Late July 2018 we learned Tess has stage 5 lymphoma. She has been treated through chemotherapy to give her a bit more time and it has been a dramatic change from where she was. Our vet suggested to look into cannabis relief for her discomfort. I bought the large breed Edibites and within 2 hours of her first "snack" she was comfortably resting on her side for which she has not done for almost a month. I felt yes this truly makes a difference so I have now started her on the hemp oil also. She is our love and the difference we have seen in her since giving her Pet Releaf products is seeing the comfort we want for her through this journey.

Thank you from the bottom of our hearts for giving us this opportunity for her to be herself.

# Ramble — Pain Management

Sep 26

Share this

Ramble started using the CBD oil when he had a bad fall and wasn't able to walk on his hind legs without major pain. After X-rays, we found out he had major bone growth on his spine that is potentially cancerous and his kidneys were not looking great either! The vet wanted to put him on these heavy drugs that would ultimately shorten his life causing his kidneys to fail. That's when we turned to the CBD oil and a glucosamine + chondroitin supplement. I can hands down say that your product gives Ramble the ability to walk without pain. He even jumps! He climbs on things and even though he sleeps 14 hours a day or more, he is more active than he ever

was! He doesn't yelp or cry out in pain and he is way calmer too. This product has not only saved us hundreds of dollars on medication but improved his life and lengthened his life more than we could have ever imagined. Thank you!

# Winston — Epilepsy

Sep 26

Share this

Winston began having seizures in the spring that he turned three.

The vet diagnosed him with epilepsy.

We personally decided to not use phenobarbital because he is so young and phenobarbital can be hard on their body; he was having a seizure about once every 3 weeks or so.

He is now 4, and before we started pet releaf had three seizures in a months time. We finally decided to take the plunge with CBD, afraid that one of his seizures he wouldn't come out of.

We're using Pet releaf hemp oil 700 full spectrum.

I'll admit that I've missed a day or two

here and there, but we have been seizure free for almost 6 weeks now!

Which is a relief! He is a 70lbs dog and his seizures were not only scary but dangerous... at his size the thrashing and jerking was awful; we'd have him hitting his head or legs in things depending on where he went down for the seizure, we weren't only concerned about the seizures but him hurting himself during one.

Thank you Pet Releaf!

# Gas Burn Canna Care Testimonial

Sep 26

Share this

Here are the before & after pictures of the lady that I told you about that was burned on the lower leg by her gas grill. The accident happened towards the end of May 2018, started using the cream about 6-8 weeks ago! I did get her verbal permission to show you

the pictures. She is so thankful that the Canna Care has healed her burn. She was facing a possible skin graft but not so now!

The first picture is where she first went to the ER with the initial burn (banded stripe on leg) 2nd photo is after it had blistered and peeled and left the entire lower leg red & weeping and shows the severity of the actual mess that it was. That was when she started on the Canna Care. The last photo is of what it looked like yesterday. She has been using the cream everyday at least 2 times per day now. She is so thankful for coming in to my store & is talking about the product with her. I don't think conventional medicine would have produced this result!! She says she tells everyone about the Canna Care now!

# Ruby — Separation Anxiety

Jan 19

Share this

We started giving Ruby the peanut butter and banana Edibites to see if it would help calm her anxiety. And it did. Fairly quickly.

Ruby is a rescue dog and had a hard life and high anxiety before we adopted her. She's calmer, more relaxed, and she doesn't bark at and try to chase cars as much.

She cuddles more with us and even with her canine sibling, which she

would never do before. I hope as we keep giving her these treats she will continue to improve even more!"

# Molly — Arthritis

Jan 19

Share this

My schnauzer is 8 years old. She has been fighting arthritis and sacrum disk degeneration for about a year.

We had been through a few rounds of cold laser therapy that would provide her relief for a few weeks. We had tried anti-inflammatory meds as well as mild pain meds but it seemed like we always took 2 steps forward and then 1 step back.

She was even confined to the first floor for weeks due to trying to “give her time to heal” because the vets thought she was one wrong move away from seriously not being able to climb stairs again. My son, who studies the use of CBD’s in humans, did some research and found your

company. He is vegan and organically sourced plant products are his life! (Horticulture business major too).

So, he ordered first from you in mid-June some of your treats. Within 2 weeks, she was playing around like a puppy. She has been on them steady since then. I tell everyone that it has shaved 5 years off her life. Thank you!”

# Baron — Cancer Symtoms

Jan 19

Share this

On the 18th of October, an Ultrasound revealed another mass just above his bladder. The chances are it is Cancer... However, after his second surgery (this past January), I decided to stop all further treatments, other than whatever I can do for him naturally.... He is a Working K-9, and I wanted his life to be the best quality I can give him and allow him to do the jobs he loves! More surgeries and Chemo would not give him that, in my opinion....

He is currently on natural supplements, and the best quality food I can afford. When I read about your Hemp Oil, I decided to give it a try. It has made a big difference in him (I started his first dose when I got my first shipment on Nov. 1, 2017). He is happy, energetic and has a great zest for life, as well as a wonderful appetite! At 109#, he is doing wonderfully, thanks, in no small part, to your wonderful product!

# Rosie — Tumor Removal Surgery

Jan 19

Share this

TOP picture was immediately after my surgery to remove my gingival hyperplasia tumor on my gum line, it was about the size of a quarter. MIDDLE Picture is 3 days post-op & BOTTOM Picture is 7-days post op. It usually takes 10-14 days until it's completely healed, but I healed within a weeks time because my mom used @petreleaf 300mg CBD Oil [Hemp Oil 1000]! I definitely recommend it, it works real wonders! I healed quickly & wasn't in any pain during the healing period!! I actually tried to chew on a couple bones I felt so good.

# Punkin' — Brain Tumor

Jan 19

Share this

We started giving Punkin CBD oil after we received the devastating diagnosis of a possible brain tumor. In fact as soon as we left the Emergency Vet, we went to our local pet store and bought the CBD oil and we immediately saw a major difference in her. She stopped circling to her left, she relaxed, and finally went to sleep after being awake for two straight days. We are so grateful to find a product that has helped control her pain, anxiety, and improve her quality of life. The CBD oil has also helped control her seizures. I truly believe that using Pet Releaf CBD oil has helped save my Punkin and greatly improved her quality of life.

# Laila — Epilepsy

Jan 19

Share this

Having maxed Laila out on medications without causing organ damage, we felt desperate to try CBD oil to hopefully keep her from having more seizures. Not only did CBD oil keep her seizure frequency from increasing, she had only ONE SEIZURE IN SIX MONTHS! She had never been seizure free for that long since her original diagnosis! The seizure she had was induced during a very loud storm with frequent flashes of lightning. I had read to use your finger to rub oil on the gums during a seizure. That's what I did, and her seizure was less than a minute, far shorter than her seizures prior to CBD oil.

I did learn that not all oils are the equal the hard way. As Laila began running out of Pet Releaf, I used a bottle of another brand that had been given to me. Within two days she was seizing in clusters all weekend, and once again having trouble walking. I put her right back on Pet Releaf. Within the next two days, we were once again seizure free, running and playing again!

# Sheebah — Cushings Disease

Jan 19

Share this

We gave her first dose of CBD on an empty stomach as recommended and within an hour she was laying in the living room sound asleep, no panting, no whining, just calm and relaxed. From then her other symptoms greatly subsided.

She was not excessively thirsty, she did not appear anxious, her skin and eyes returned to normal, and her appetite was good. I firmly believe our girl would not have lasted as long without this amazing product. I would recommend it to anyone whose dog is suffering chronically like ours was.

# Darwin — Facial Paralysis

Jan 19

Share this

Per recommendation of some friends who have dogs on CBD oil, we started Darwin on the Pet Releaf 300 mg oil that same week. We started it 3 times a day and within 48 hours (6 doses later), Darwin actually RAN down the back stairs into the backyard. That was my first “WOW” moment because his vertigo had been so bad that we were using a body harness to help him down the stairs for several weeks prior to that. After 2 full weeks on the oil, Darwin’s head tilt, vertigo and disorientation had completely disappeared and he started to really play

with our other dog again without any stumbling.

The oil has also helped tremendously with the anxiety he has been experiencing through all of this! During Darwin’s checkup last week our vet confirmed that he is showing signs of neurological function in his eye, neck and mouth. He was blown away at how well Darwin is doing and couldn’t find any signs of facial paralysis. I also want to mention that Darwin hasn’t had any seizures and that he has stopped whimpering. We just celebrated Darwin’s 8th birthday on October 15th and I honestly didn’t think he would be with us at this point. I can confidently say that I believe it’s the only reason why he is still alive. I am beyond thrilled with our results and I am glad we found your products! Thank you so much for everything!”
